

Unitech Scanner Utility

“ USU, abbreviation of Unitech Scanner Utility, is an Android application which helps users connect, configure and use a supported Unitech Bluetooth scanner. ”

Key Benefits

Scanner Quick Pairing

Simply scan the “Quick Pairing Barcode” on the Android device screen, confirm the pairing message box and then the pairing process will automatically complete.

Scanner Information

As the scanner connected, information includes its serial number, firmware version, battery status, and the Bluetooth information such as name and MAC address.

Scanner Configuration

Configure the barcode symbology and firmware settings. The former one helps to identify different types of barcode; the later one helps to exported to a file and then imported to another Android device running USU.

Label Formatting

Label formatting is a post-processing of text which allowing user to specify the prefix, suffix and the terminator text to append to the scanned barcode or even specify via Regular Expression before outputting to textfield.

Launch Work App when connected

USU can be configured to automatically launch a specified application on the Android device whenever a scanner is paired. It allows the users to immediately start working on their work app right after the connection is finished.

Multiple Data Output Options

When a barcode is scanned by the connected scanner, USU can output the scanned data as Keystrokes (Key Emulation), or as Clipboard Paste (Copy & Paste), and optionally output as Android Intent Data.
